Southern Pulpwood Production, 1994

Tony G. Johnson, Forester and Michael Howell, Forester Forest Inventory and Analysis Asheville, North Carolina

SOUTHERN RESEARCH STATION

Asheville, North Carolina and Forest Service, U.S. Department of Agriculture in cooperation with AMERICAN PULPWOOD ASSOCIATION

Introduction

This annual publication presents the findings of a 100-percent canvass of pulpmills that draw roundwood or wood residues from the 13 Southern States. Kentucky, formerly in the Northeastern region, was added to the Southern region in 1994. For comparison purposes, Kentucky's pulpwood production and mill data for 1993, and preceding years where applicable, has been added to the 12 Southern States' production and mill data. Canvass data are compiled, analyzed, and reported annually by the Southern Research Station. Ninety-eight of the 104 mills canvassed responded. Past canvass data and other sources of information were used for mills that did not respond. Mill data reported in nonstandard units were converted to standard cords with regional conversion factors. All production figures are reported in cords. Production expressed in equivalent green tons are reported in tables 1, 2, and 7-19.

Pulpwood

The general upward trend in pulpwood production seen over the past decade continued in 1994. This is attributable to a stable economy that fueled demand for pulp and paper products creating an increased demand for pulpwood. Southern production increased by 2 percent in 1994 to 68.5 million cords, or nearly 181 million green tons. In 1994, the South Central region (previously referred to as the Midsouth), which now includes the state of Kentucky, led in the production of pulpwood. This region supplied 37.7 million cords compared to the Southeast's production of 30.8 million cords (table 1). Alabama continued to lead the South with 11.3 million cords of pulpwood produced in 1994 (fig. 1), an increase of 10 percent from 1993. Georgia's production remained steady at 9.6 million cords. Production in Mississippi and Louisiana increased by 1 and 3 percent, respectively, to 7.9 and 7.3 million cords. Collectively, these four States accounted for 53 percent of the South's total production. All States except Arkansas, Kentucky, North Carolina, and Oklahoma reported production increases

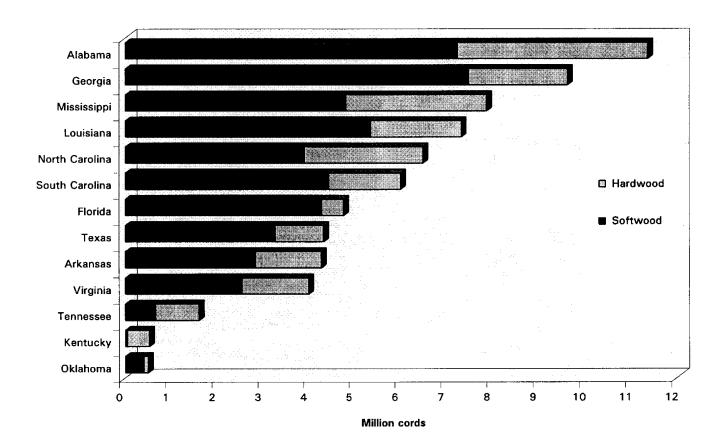

Figure 1-1994 Pulpwood production, by State and broad species.

(table 2). The 15-percent production increase in Tennessee was the largest among all States, while the largest percentage drop, a 15-percent decline, occurred in Kentucky. Softwood roundwood and residues combined accounted for 69 percent of the total pulpwood production, while hardwoods accounted for the remainder (table 3). These proportions have remained relatively stable over the last 5 years.

Roundwood

Roundwood continues to be the primary fiber source used in pulp manufacture, accounting for 70 percent of the total pulpwood production (fig. 2). Overall, the South's roundwood production was up 3 percent in 1994, to a total of 47.8 million cords (table 4). Softwood accounted for nearly two-thirds of the total roundwood production. Both softwood and hardwood roundwood production increased 3 and 2 percent, respectively. Alabama led in total roundwood production, with 8.9 million cords, and was the leading producer in both softwood and hardwood roundwood, at 5.4 and 3.5 million cords, respectively. Alabama was followed by Georgia with 6.9 million cords total roundwood, Mississippi with 5.6 million cords, and Louisiana with 4.9 million cords. The combined roundwood production for these four states made up nearly 55 percent of the total roundwood production for the Southern States. Tennessee and Oklahoma had the largest percentage increase at 20 percent each, while Kentucky had the largest percentage decline, 14 percent. Alabama had the largest volume increase of 897,000 cords, while Texas had the largest volume decline of 283,000 cords.

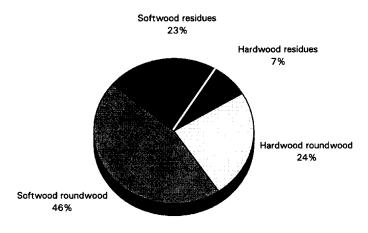

Figure 2—Distribution of total production, by roundwood and residues.

Wood Residues

Mills report two types of receipts: (1) roundwood and (2) wood residues. The second category is primarily chips. An unknown proportion of the residue was chipped in the woods or was received at a primary processor (i.e., sawmill or veneer mill) as roundwood and subsequently chipped. Thus, an unknown proportion of the wood chips received at pulpmills as residues should be treated as roundwood because it was not a byproduct of the milling process. However, this data is only obtained from a complete canvass of all commodities for each State and is not available for this report.

With this in mind, in 1994, wood residue production in the South was up 2 percent to 20.6 million cords (table 5). More than three-fourths of the wood residues produced were softwoods. Chipped residues accounted for almost all the residue produced (table 6). Georgia led all states in the production of wood residues at 2.7 million cords, followed by Alabama and Louisiana with 2.4 million cords each. Six of the 13 States had production declines in 1994. Arkansas had the largest volume decline, down 311,000 cords, while Texas had the largest volume increase at 355,000 cords. The South Central region led the Southeast in wood residue production, supplying 60 percent of the total residue volume.

Parish or County Production

Tables 7-19 report parish (hereafter referred to as county) and county patterns of roundwood pulpwood production. Wood residues are not included in these figures because the county of origin for the residues is difficult if not impossible to determine. Of the 1,002 counties encompassed by the Southern region, 902 counties produced either softwood or hardwood roundwood. Eighteen of the 902 producing counties harvested more than 250,000 cords of both softwood and hardwood roundwood combined. Most of these counties were concentrated in Alabama. More than 14 percent, or 131 counties across the South, had roundwood production ranging between 100,000 and 250,000 cords. These counties were fairly evenly distributed across the South. The remaining counties had production of less than 100,000 cords. Figures 3 and 4 display roundwood production figures broken out in more detail and displayed by softwood and hardwood.

A barometer for degree of competition is the number of mills procuring wood in a county (figs. 5 and 6). In 400, or 44 percent, of the producing counties at least one to three mills were actively procuring both

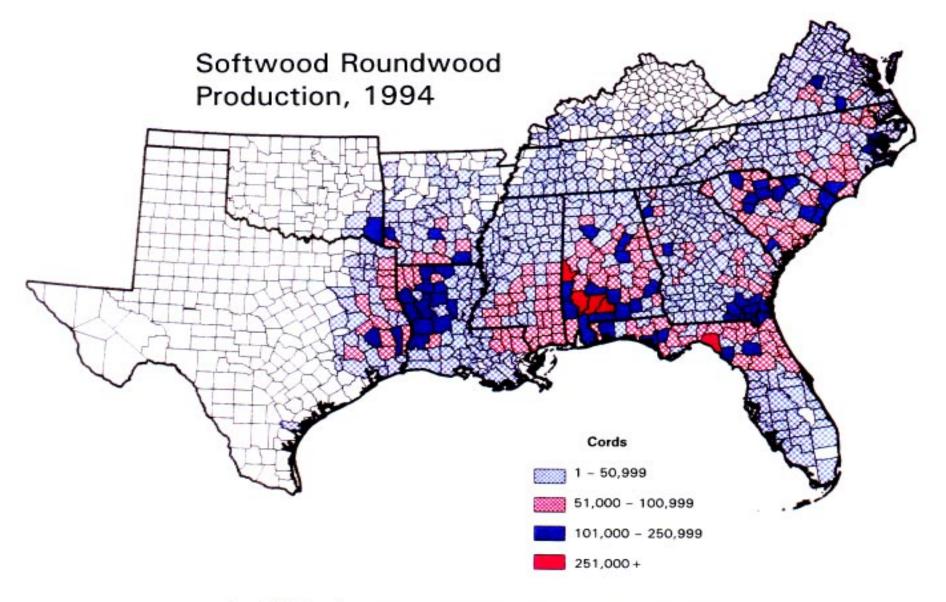

Figure 3 - Softwood roundwood production in the South by county or parish, 1994.

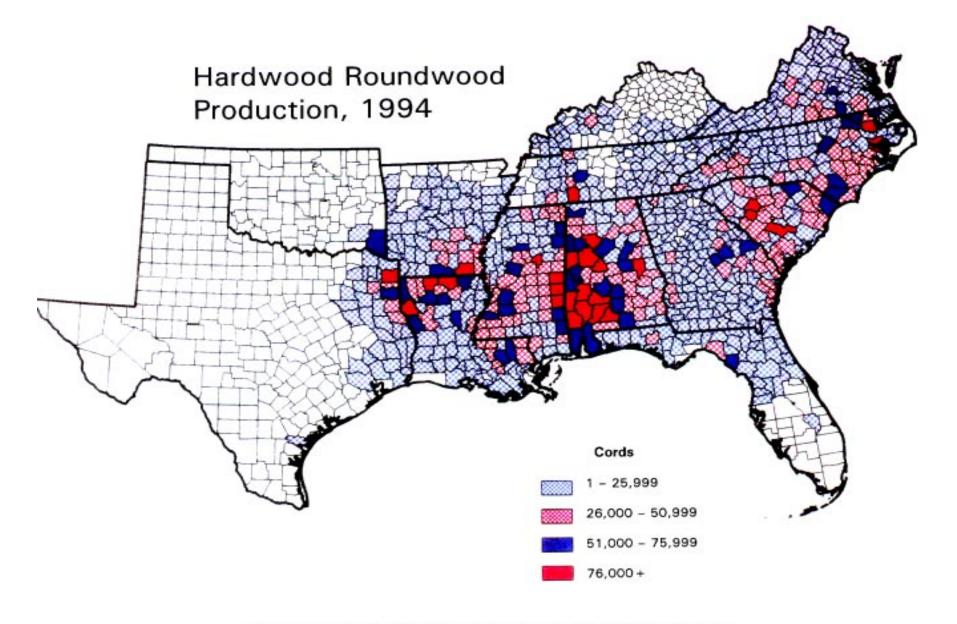

Figure 4 - Hardwood roundwood production in the South by county or parish, 1994.

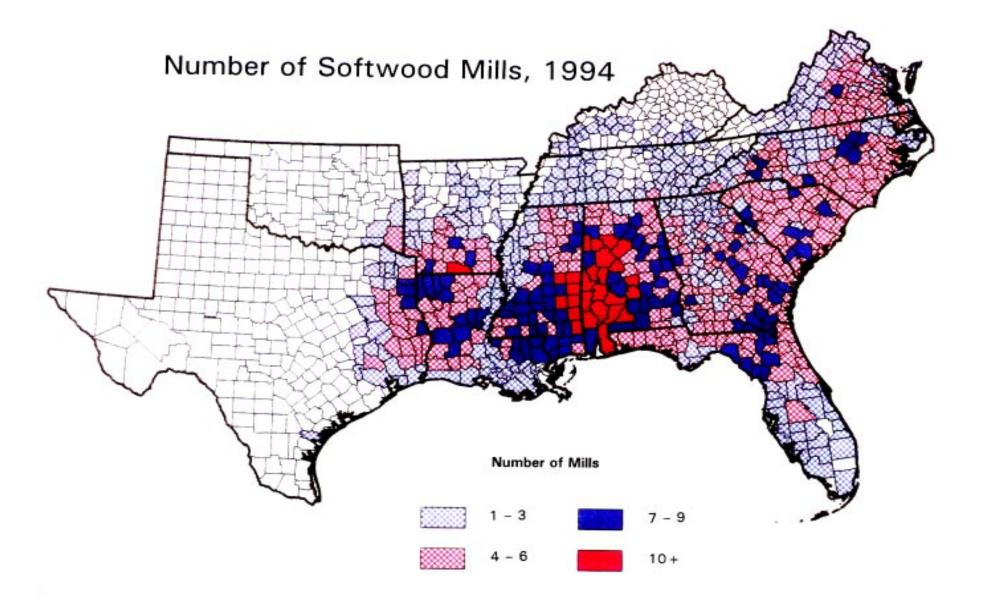

Figure 5 - Number of mills competing for softwood roundwood by county or parish, 1994.

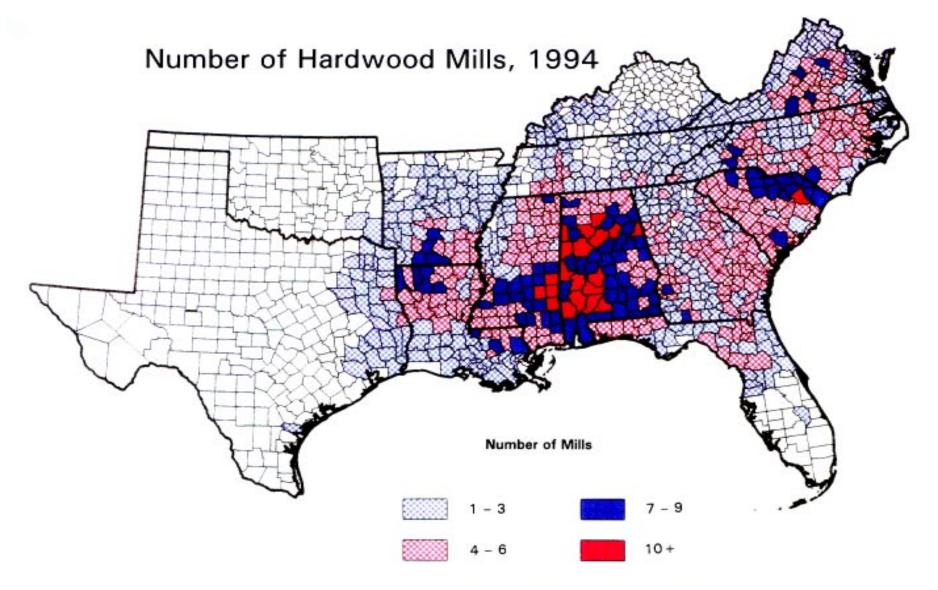

Figure 6 - Number of mills competing for hardwood roundwood by county or parish, 1994.

softwood and hardwood roundwood (see tabulation below). In 245 counties, four to six mills were actively procuring wood and in the remaining 257 counties, or 28 percent of the producing counties, seven or more mills were active. Larger procurement areas, increased competition among mills, and increasing value for the resource should provide a strong incentive for every forest owner to manage their timber.

Number of southern producing counties, by the number of pulpmills procuring softwood and hardwood roundwood, 1994

Number			
of mills	Total	Softwood_	Hardwood
	Nun	nber of coun	ties
0	0	58	46

10+	65	27	21
Total	902	902	902

Mills

In 1994, 104 Southern pulpmills were operating and drawing wood from the 13 Southern States (fig. 7). The addition of Kentucky has added two mills to the Southern pulpmill count. Total Southern mill pulping capacity increased from 134,867 to 139,880 tons per day. Southern mills now account for more than 69 percent of the nation's total pulping capacity. Daily capacity of individual mills ranged from 50 tons to more than 3,000 tons. The average mill can produce 1,345 tons of pulp daily as compared to 1,323 tons in 1993 and 1,161 tons in 1985. The sulfate process dominates the pulping industry today, accounting for 84 percent of the Southern mill capacity. Ten percent of the capacity is groundwood or other mechanical processes, 5 percent semi-chemical, and 1 percent soda and other chemical processes (table 20). At the

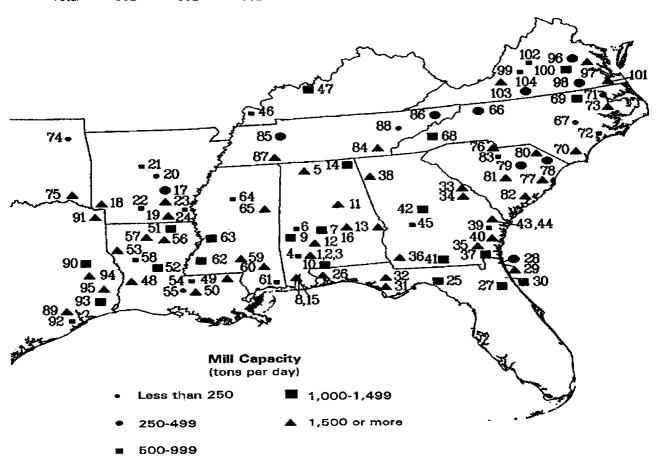

Figure 7—1994 capacity of Southern pulpmills operating and drawing wood from the 13 Southern States. Numerals are coded to table 20.

current production of 68.5 million cords for 1994 and pulping capacity of nearly 140,000 tons, Southern mills operated at about 85 percent of capacity.

Alabama and Georgia continued to lead the South in the number of mills operating with 16 and 13 mills, respectively. Alabama led in pulping capacity with 23,700 tons per day, to Georgia's 22,225 tons per day (see tabulation below). In addition, five pulpmills outside the Southern region drew wood from the South in 1994 (table 21).

Number of pulpmills and pulping capacity, by State, 1994

		24-hour
State	Mills	capacity
		
Alabama	16	23,700

Texas	7	10,045
Virginia	9	8,965
All States	104	139,880

Trends

From 1985 through 1994, Southern pulpwood production increased by 19 percent, from 57.5 to 68.5 million cords (fig. 8). During the same period, roundwood pulpwood production increased from 37.3 to 47.8 million cords, a 28 percent gain. Between 1985 and 1994 softwood roundwood production increased 23 percent, while hardwood roundwood production increased 38 percent. The production of wood residues increased nearly 3 percent from 20.1 million cords in 1985 to 20.6 million cords in 1994. Wood residues as a proportion of total production seemed to peak in 1985 at 35 percent. However, wood residues continue to be an important source of fiber for the pulpwood industry in the South, accounting for 30 percent of all pulpwood production in 1994.

 $^{^{\}rm c}$ This is pulping capacity for three mills at this site.

The Forest Service, U.S. Department of Agriculture, is dedicated to the principle of multiple use management of the Nation's forest resources for sustained yields of wood, water, forage, wildlife, and recreation. Through forestry research, cooperation with the States and private forest owners, and management of the National Forests and National Grasslands, it strives—as directed by Congress—to provide increasingly greater service to a growing Nation.

The United States Department of Agriculture (USDA) prohibits discrimination in its programs on the basis of race, color, national origin, sex, religion, age, disability, political beliefs, and marital or familial status. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means of communication of program information (braille, large print, audiotape, etc.) should contact the USDA office of Communications at (202) 720-2791. To file a complaint, write the Secretary of Agriculture, U.S. Department of Agriculture, Washington, DC 20250, or call (202) 720-7327 (voice) or (202) 720-1127 (TDD). USDA is an equal employment opportunity employer.

Johnson, Tony G.; Howell, Michael 1996. Southern pulpwood production, 1994. Resour. Bull. SRS-1. Asheville, NC: U.S. Department of Agriculture, Forest Service, Southern Research Station. 32 p.

The South's production of pulpwood increased 2 percent to 68.5 million cords. Roundwood production increased to 47.8 million cords and accounted for 70 percent of the total pulpwood production. The use of residue increased 3 percent to 20.7 million cords. Alabama leads the South in total production, number of mills, and pulping capacity. Currently 104 mills are operating and drawing wood from the 13 Southern States. Southern mills' pulping capacity of 139,880 tons per day accounts for 69 percent of the nation's total pulping capacity.

KEYWORDS: Pulpmills, pulpwood, roundwood, residues, pulping capacity.

Southern Research Station

Established 1921

The Southern Research Station, headquartered in Asheville, North Carolina, is one of the seven regional Stations and the Forest Products Laboratory that make up the Forest Service research organization.

RESEARCH MISSION:

To acquire the knowledge, develop the technology, and disseminate the research findings required to manage the Southern forest resources in ways that satisfy demands of goods and services while maintaining a quality environment.
